DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see Remarks, filed June 29, 2006, with respect to the rejection(s) of claim(s) 7-10 under 35 USC 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of US patent no. 6,212,176.

Claim Rejections - 35 USC § 103

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Andersson et al (US 6,212,176).

Andersson et al discloses a means and method for forming logical channels and a means for mapping the logical channel to a physical channel and a means for transmitting the logical channel signals over the physical channel. See Control Channel Transceiver in Fig.4. Andersson et al further teach that each logical channel includes information and an error detecting code, i.e., CRC. See Fig. 9.

Andersson et al fails to teach that the number of radio frames (slots) of a fixed duration increases the transmission rate of the physical channel decreases.

Since each slot can carry less amount of information when the transmission rate of the physical channel is lowered, it would have been obvious to one skilled in the art increase the number of time slots in order to ensure the same amount of data to be transmitted.
